

HCG-VCSEL Simulation Using PICS3D

High Contrast Grating (HCG)

Grating

- Formed by periodically change material in one, two or three directions.
- Grating can be divided into three categories
 - Diffraction Grating
 - Effective medium grating
 - Sub-wavelength (Resonance) Grating

High Contrast Grating (HCG)

Grating

- Grating parameters
 - Grating period (pitch size) (Λ)
 - Fill factor (f)
 - Ratio between grating material width and pitch size (d/Λ)
 - Grating thickness (t_g).
- Grating type
 - Diffraction Grating
 - Effective medium grating
 - Sub-wavelength (Resonance) Grating

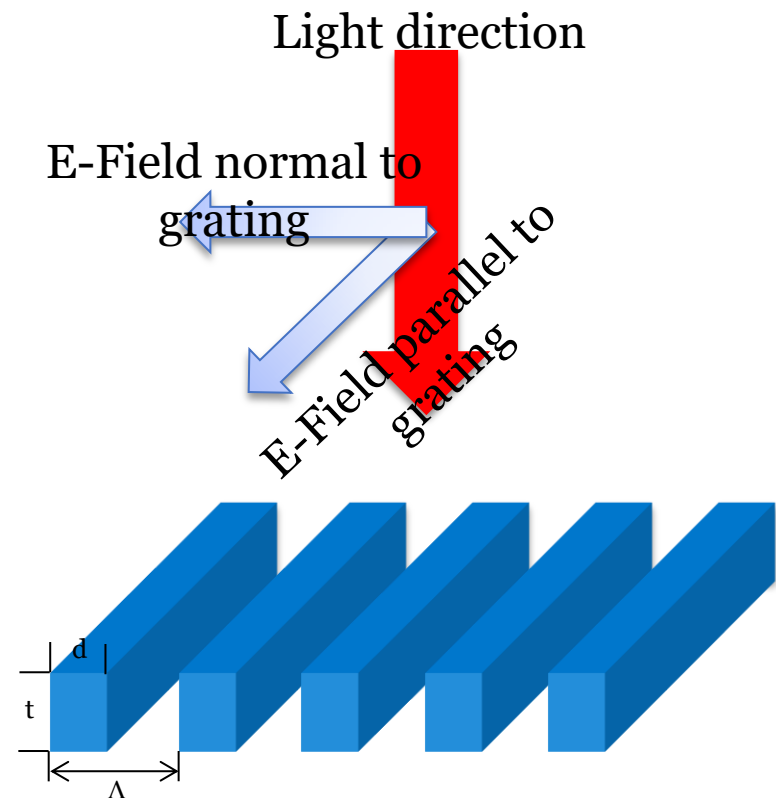

High Contrast Grating (HCG)

 HCG is a sub wavelength grating

- It has a high index contrast between the low / high refractive material

 Optical properties

- Resonance behavior at a certain band, therefore a perfect reflection within a certain band can be achieved.
- HCG is a polarization sensitive
 - Mode with E-Field parallel to grating.
 - Mode with E-Field normal to grating.

High Contrast Grating (HCG)

Application

- Compact VCSEL design
 - In order to reduce the size of the VCSEL, the top DBR layer can be replaced with HCG
 - Tunable VCSEL can be realized by using MEMS based HCG

HCG VCSEL

VCSEL

- Bottom DBR
 - 29 layer
- Cavity
 - Spacer
 - 7 MQW
 - spacer
- Top DBR
 - 18 layer
- HCG

HCG VCSEL

- Bottom DBR
 - 29 layer
- Cavity
 - Spacer
 - 7 MQW
 - spacer
- Top DBR
 - 18 layer
- HCG
